**THANK YOU FOR YOUR COOPERATION!**

**T**hank You for purchasing the Driven Diesel 2017-2019 6.7L Ford Powerstroke **TRANSMISSION COOLER BYPASS KIT!** Due to the fact that our liquid-to-air cooler is so effective, we developed this kit is to bypass the Driven Diesel Transmission Cooler during cold weather operation, which will leave only the OEM cooler in use and cause the transmission to run at a warmer temperature. **THIS KIT DOES NOT BYPASS THE OEM COOLER!** **Please read and familiarize yourself with this manual fully before proceeding with the installation of the kit.** Also, always work safely. Make sure that there is plenty of light and adequate ventilation, and allow yourself several hours to complete the installation. After reading these instructions, if you feel that the installation is beyond your capability, please have this kit installed by a qualified mechanic.

## **Cooler Bypass Installation**

The goal here is to disconnect the hoses going to the currently installed Driven Diesel Transmission Cooler, connect them to each other using the provided double male brass fitting and clamps, and then connect the new bypass hose to the compression fittings that were previously installed onto the OEM transmission cooler tube. This should be about a 10 minute installation that can easily be swapped back when desired, and will leave both the Driven Diesel Transmission cooler and the new Bypass Hose sealed from dirt and debris when not in use.

Using the diagram on the next page as a guide, route the cooler bypass hose (with the split loom installed) over the top of the OEM transmission cooler so that you have approximately the same amount of hose hanging down on each side of the cooler. Using a pair of pliers, open each of the provided clamps and push them about 2" up each end of the cooler bypass hose.

If you have a way to pinch the Driven Diesel Transmission Cooler hoses closed (hose pinch pliers or similar), it will make the next steps less messy.

One side at a time, pinch open the clamp and remove the Transmission Cooler Hose from the previously installed compression fitting. Quickly push the end of the Cooler Bypass Hose onto the compression fitting to prevent too much fluid from leaking. Repeat for the other side, then reposition the clamps on the bypass hose so they are securing the hose to the compression fittings.

You should now have the previously installed transmission cooler hoses hanging down (and leaking if you couldn't pinch them closed). Simply connect the ends of these 2 hoses together with the provided brass fitting and position the clamps to secure them.

You have now completed a bypass of the Driven Diesel Transmission Cooler. When the cooler is needed again, reconnect the cooler hoses to the compression fittings and use the brass fitting between the ends of the cooler bypass hose to prevent drips and keep the inside clean.
